Glossary

The following abbreviations are used throughout this document to denote the listed words, terms, and phrases:

ACT – WV Code Chapter 22, Article 36
BAN – Bond Anticipation Note
BCL – Binding Commitment Letter
BIL – 2022 Bipartisan Infrastructure Law
BPH – West Virginia Bureau for Public Health
CWSRF – Clean Water State Revolving Fund
DWTRF – Drinking Water Treatment Revolving Fund
DEP – West Virginia Department of Environmental Protection
DH – Department of Health
EPA – United States Environmental Protection Agency
ETT – Enforcement Targeting Tool
IIJA - 2022 Infrastructure Investment and Jobs Act
IJDC – West Virginia Infrastructure and Jobs Development Council
IUP – Intended Use Plan
LSL – Lead Service Line
MHI – Median Household Income
OA – Operating Agreement
OEHS – West Virginia Office of Environmental and Health Services
PFAS – Polyfluoroalkyl Substances
PPL – Project Priority List
PSC – Public Service Commission of West Virginia
PWS – Public Water System
PWSS – Public Water Supply Supervision Program
SDWA – Safe Drinking Water Act
USGS – U. S. Geological Survey
WDA – West Virginia Water Development Authority

SECTION I

Introduction

This document is the Drinking Water Treatment Revolving Fund's (DWTRF) Intended Use Plan (IUP) for state fiscal year 2026 (July 1, 2025 – June 30, 2026 (FY2026)).

The Safe Drinking Water Act (SDWA) amendments of 1996 authorized a DWTRF program to assist public water systems in financing the cost of the infrastructure needed to achieve or maintain compliance with SDWA requirements and protect public health. The WV Legislature created the DWTRF in 1997. In addition to federal capitalization grants and amendments awarded by the United States Environmental Protection Agency (EPA), the State has provided, where required, the matching funds for each grant and amendment. Repayments of loans, dedicated settlements, and investment earnings are also available within the Drinking Water Treatment Revolving Fund to fund drinking water projects. Funds available during this fiscal year are listed in Section II.

The West Virginia Legislature, at the 2023 Regular Session, passed House Bill 561, which transferred administration of the DWTRF from BPH to the DEP effective July 1, 2023. The DEP will be working in collaboration with the Office of Environmental and Health Services (OEHS) to provide funding to necessary projects and to provide financial support to the OEHS to carry out set-aside activities funded under Sections 1452 (g)(2)(A), (B), (C), and (D) and Sections 1452 (k)(1)(B), (C), and (D) of the Federal Safe Drinking Water Act.

As a result, the DEP is responsible for issuing and implementing the IUP and providing the necessary funding from the set-asides to fund all eligible expenditures in support of the OEHS Environmental Engineering Division.

SECTION II

Funds Identification

The chart on the next page identifies the sources that will be used for loans and other anticipated expenditure categories. The 2% Technical Assistance funding is used to contract for a Continuing Education Training program for water operator training and certification. The 10% Program Management funding is used for enhancing the Public Water Supply Supervision Program (PWSS). The 15% Local Assistance funding is used in implementing the state source water protection program, operator training and certification program, and public water system technical assistance, emergency response assistance, and sanitary surveys. Projects will be added to the IUP from the PPL in priority order, subject to readiness to proceed. The DWTRF is also reserving the authority to transfer to or receive funds from the Clean Water State Revolving Fund as needed to accomplish program objectives and demand. The DWTRF also reserves the authority to leverage the Fund as needed as well as use the flexibility to cross-collateralize the CWSRF and DWTRF as needed.

WEST VIRGINIA DRINKING WATER TREATMENT REVOLVING FUND

Intended Use Plan – Sources and Uses of Funds

State FY2026 (July 1, 2025 – June 30, 2026)

Available funds as of March 31, 2025:

Cash balance in DWTRF account	\$ 41,407,199	
Federal funds accounts payable	<u>\$117,687,602</u>	
		<u>\$ 159,094,801</u>

New funds available during state FY2026:

Next Federal EPA Base Grant	\$ 10,906,000	
Next Base State Match	\$ 2,181,200	
Next Federal IJJA Grant	\$ 24,898,000	
Next IJJA State Match	\$ 4,979,000	
Emerging Contaminants Grant**	\$ 7,640,000	
Lead Service Line Replacement funds**	\$ 28,650,000	
Est. Repayments (principal) (to 6/30/26)*	\$ 10,274,830	
Est. Repayments (interest) (to 6/30/26)*	\$ 1,458,957	
Est. Investment Earnings (to 6/30/26)*	<u>\$ 1,891,972</u>	
		<u>\$ 92,879,959</u>

Less:

Existing project loans payables (3/31/25) =	\$167,790,294	
Existing binding commitments (3/31/25) =	\$ 21,407,014	
2 percent set-aside for Technical Assistance	\$ 500,000	
4 percent set-aside for Program Administration	\$ 0	
10 percent set-aside for State Program Management	\$ 1,493,149	
15 percent set-aside for Local Assistance	<u>\$ 4,823,825</u>	
		<u>\$196,014,282</u>

Net available funds during FY2026 = \$ 56,073,278

Notes:

The matches should be received from the IJDC by July 2025.

*These are estimates at this time. Project funding will be adjusted to accommodate the actual funds received.

** No match is required

SECTION III

Goals

A. Short Term Goals

1. Fill vacant staff positions within the OEHS, Environmental Engineering Division (EED). There are currently multiple positions vacant throughout the Division.
2. Work with appropriate agencies in the implementation of West Virginia's PFAS Protection Act.
3. Work with Public Water Systems (PWS) to reduce health-based violations.
4. DEP and OEHS will continue to work together to implement House Bill 561 and implement the agreed upon Memorandum of Understanding.
5. Maintain a pace goal of at least 95%.
6. Work with EPA to amend the Operating Agreement.

B. Long Term Goals

1. Assist with and fund the necessary infrastructure to upgrade water quality for existing public water customers and to provide water to individuals whose water currently does not comply with the SDWA or is unreliable.
2. Ensure the DWTRF program operates in perpetuity at its maximum level to provide financial assistance to qualified entities.
3. Continue implementation of the Capacity Development Strategy including assisting public water systems in acquiring and maintaining the technical, managerial, and financial capacity to comply with the SDWA. Provide assistance to ensure that all new community water supplies and new non-transient non-community supplies have the technical, managerial, and financial capacity to comply with current regulations and those regulations likely to be in effect, when the proposed systems initiate operations.
4. Funding will be provided to OEHS from available set-aside funding to continue development, enhancement, and improvement of the PWSS through improved methodology and consistency of the sanitary surveys. This includes completion of a full complement of staffing in the district offices and implementation of an automated data collection system for laboratories to forward results to OEHS.

5. Funding will be provided to OEHS from available set-aside funding to protect source water from future contamination through Source Water Assessment and Protection (SWAP) and Well Head Protection (WHP) programs.
6. Funding will be provided to OEHS from available set-aside funding to continue to implement an operator training continuing education program focusing on training course/instructor criteria and operator training requirements.
7. Funding will be provided to OEHS for implementation of new regulations.
8. Continue to strive to minimize unliquidated obligations (ULOs) by expeditiously disbursing both set-aside and construction funds in a timely manner. The goal is to attain a half year or less balance for the 2%, 10% and 15% set-asides at the time a new grant is awarded. Set-aside amounts requested in this IUP are supportive of minimizing ULOs.

SECTION IV

Project Priority List

Projects requesting DWTRF funding assistance are prioritized using the DWTRF Project Priority Ranking System. Three categories (public health, regulatory compliance, and affordability) are used to determine project scoring. Projects that apply for DWTRF funding are ranked and are listed in the Comprehensive Project Priority List (Appendix A). The highest ranked projects on the PPL are contacted concerning their project status to determine if funding from the DWTRF is appropriate and the project is ready to proceed. The PPL ranking system allows for higher public health ranking for utilities that have multiple violations as reflected in the Enforcement Targeting Tool (ETT). The ranking system allows coordination of projects funded with consideration of the enforcement agency.

Projects expecting to receive assistance from the DWTRF are on the Fundable Project Priority List (Appendix B). These projects include distribution system upgrades, water treatment plant improvements, extensions to new customers, lead service line inventories, lead service line replacements, and emerging contaminant treatment. Projects solely for economic growth or projects solely for fire protection are not eligible for DWTRF assistance.

Projects that rank lower on the PPL may still receive funding should one or more of the higher ranked projects be bypassed using the bypass procedure described below.

A. Bypass Procedure

Prior to implementing the bypass procedure, projects listed on the PPL will be reviewed to determine their readiness to proceed. Based on the review, DWTRF staff will determine whether to bypass the project and select another project for funding commitment consideration. A project will be bypassed based upon readiness to proceed and ability to receive a binding commitment prior to the end of the term of this IUP. To be considered

ready to proceed and eligible to receive a BCL, the project must be able to meet all DWTRF programmatic requirements, have approved plans and specifications, have all funding sources identified, and be ready to proceed to construction within six months of receiving the BCL. If, during the year, a project that was anticipating funding based upon Appendix B, has a substantial scope change that would require it to be re-ranked below another project that is ready to proceed, this project will be re-evaluated for funding at a later date. Any projects with any technical, managerial, and financial capacity concerns that are not expected to be resolved by the proposed project will only be considered after the issues have been resolved.

When a project is bypassed, the project will remain on the PPL for consideration at a future time. DEP will provide technical assistance (as needed) with bypassed projects to assist them in becoming eligible for future funding.

If additional projects are developed during the fiscal year that do not appear on the list, but would like to be considered, they may be added to the list after adequate public notification procedures have been completed. This procedure generally takes 60 days.

B. Emergency Projects

Projects to remediate an imminent significant hazard to a community's public health may be considered an emergency project if approved by OEHS and DEP. An emergency project may not be required to be on the approved PPL if the evaluation by OEHS and DEP verifies the urgency of the project execution to avoid a major impact to the water system's customers. Emergency projects may be reviewed and approved by the IJDC.

C. Requirements for a Binding Commitment

Once it has been determined that a project can realistically proceed to construction within six months, a formal commitment of DWTRF funding will be made that may include such terms and conditions as deemed necessary. At a minimum, the plans and specifications must be approved, and consideration will be given to the status of rights-of-way and real estate obtainment and other items on the pre-bid checklist during this process.

SECTION V

Fund Activities

The SDWA regulations, 40CFR35.3525(a)(5), require that at least 15% of the funds in the DWTRF must go to systems serving less than 10,000 total persons. The SDWA allows banking the prior year's excess above the 15% toward meeting the current fiscal year's requirement. In accordance with the above regulation, the projects listed in the Funding List, Appendix B, will ensure that at least 15% of the funds will meet this requirement.

West Virginia legislation establishes the DWTRF requirement for disadvantaged communities. *"The Department of Environmental Protection shall, in accordance with the provisions of the*

federal Safe Drinking Water Act, establish a program for loan subsidies to disadvantaged communities. Thirty percent of the federal capitalization grants made to this state shall be dedicated to the funding of projects for disadvantaged communities” (WV Code §22-36-2(d)). The 30% requirement will be calculated on a cumulative basis of awarded grants. The projects listed on the Fundable List, Appendix B, will ensure that this requirement has been met.

Disadvantaged communities are those that have a monthly water user rate equal to or greater than 1.5% of the MHI and/or receive principal forgiveness because of income, unemployment, population loss, providing service to failing and/or unserved areas, and poverty rates.

A. Interest rates for PWS loans

The eligibility criterion for low interest loan consideration will be based upon 3,400 gallons of monthly water usage. The DEP will use this criterion to determine the interest rate on loans. The maximum allowable term* of the loans will be determined using the following range of user rates and MHI data:

*Less than 1.5% MHI: Terms will be based upon the 25-Bond Revenue Index. At BCL issuance, the DWTRF will use the last published rate less 5 basis points (.05) for a 20-year term. At no point will the terms exceed 2.75% interest rate, .25% annual admin fee, 20-year term**

1.5% to 1.74% MHI: 1.75% interest rate, .25% annual admin fee, 21 - 30-year term

1.75% to 2.0% MHI: .75% interest rate, .25% annual admin fee, 21 - 30-year term

Greater than 2% MHI: .25% interest rate, .25% annual admin fee, 31 - 40-year term

The MHI data is derived from the 2020 census data published by the U.S. Department of Commerce, U.S. Census Bureau. Interest rates will not exceed 2.75%. For public service districts, the MHI to be used will be the lowest of either the county(s) or magisterial district(s) that is most appropriate for the project area. Magisterial district and county information can be found in Appendix D. Municipal MHI data is contained in Appendix D1.

Due to concerns over the 2020 Census data, the use of income surveys to verify the MHI of individual communities will be allowed. Please see the website for further guidance. <https://dep.wv.gov/WWE/Programs/SRF/Pages/default.aspx>

Should Congress amend the SDWA or pass reform legislation that affects small, disadvantaged communities, the DEP may revise this interest rate policy to consider other factors as required by federal law.

* The term of the loan will start on the date of the loan closing.

** For extension projects, a 30-year term will be considered if a substantial rate impact can be documented.

B. Additional subsidization for disadvantaged communities

This year's base funding allocation for West Virginia is \$10,906,000. A portion of each capitalization grant must be used for additional loan subsidization. Therefore, the DEP will be setting aside an amount up to \$5,343,940 (14% - \$1,526,840 and SDWA - \$3,817,100) from the base capitalization grant to be used as principal forgiveness.

This year's IJA (also known as BIL) funding allocation for West Virginia is \$24,898,000. IJA requires 49 percent of the allotment (\$12,200,020) to be in the form of additional subsidy as a principal forgiveness loan.

Principal forgiveness of all or part of a loan will be the mechanism that will be used to supply the additional subsidization. Additional loan subsidization is a last resort for disadvantaged communities and will only be provided when other funding options within the DWTRF program are not practical to make the project financially affordable (i.e. 40-year loan terms, graduated principal repayments, adjusting debt service coverage, etc.). A requirement of additional subsidy eligibility will be that the project must be able to show a reduction in the rate to be charged to the project related customers with an award of principal forgiveness. The agency may ask for a specific calculation showing the rate difference with or without the additional subsidy.

Additional subsidization eligibility will be on the following basis:

Income based upon %MHI – Based upon the 2020 Census data for 3,400 gallons of water usage.

<u>MHI</u>	<u>Point</u>
1.25% - 1.74%	20
1.75% - 1.99%	30
2.0% - 2.4%	40
2.5% or greater	50

Unemployment Data – As published by WorkForce West Virginia, the State's average unemployment rate was 3.6% in 2024. See Appendix E.

<u>Locality's Unemployment Rate (UR)</u>	<u>Points</u>
UR < West Virginia's UR	0
UR 0% - 2% above West Virginia's UR	10
UR > 2% above West Virginia's UR	20

Population Trends – Based upon the percentage change for the period from 2020 to 2023 (calendar years) by county as published by the Census. See Appendix F.

<u>Change in Population</u>	<u>Points</u>
Greater than +2%	0
0 to +2%	10
Less than 0%	20

Consolidation and extensions to serve unserved areas and failing systems: 10 Points

Poverty Rate greater than or equal to 20% as found on the following Census site:
10 Points <https://data.census.gov/cedsci/>

For applicants that receive at least 40 points, the project is eligible for the lesser of 50% of the total eligible DWTRF project costs or \$1,000,000 in principal forgiveness.

For applicants that receive at least 70 points, the project is eligible for the lesser of 100% of the total eligible DWTRF project costs or \$1,500,000 in principal forgiveness.

The final amount of the subsidy will be determined after receipt of bids, documentation of rate impact as a result of the subsidy, and after a formal application is submitted. Note: For wrap loans, as existing debt is retired, the dedicated revenue stream will rollover to pay the amount of any deferred loan.

C. Lead Service Line Replacement Loans

The DWTRF program will provide Lead Service Line Replacement Project loans at 0% interest for both disadvantaged and non-disadvantaged community water systems. Disadvantaged community water systems will also be eligible for principal forgiveness loans to complete service line inventories. These projects will be subject to the same loan term lengths as described previously. This year's IJA funding allocation for West Virginia is \$28,650,000*. IJA requires 49 percent of the allotment (\$14,038,500*) be in the form of additional subsidy as a principal forgiveness loan. Principal forgiveness will be distributed in the same method as described in paragraph B above. A list of potential lead service line projects is included in Appendix G of this document.

For a project to be eligible for this funding, it must meet the following definition: Any part of a service line made of lead, which connects the water main to the building inlet. A lead service line may be owned by the water system, owned by the property owner, or both. A galvanized service line is considered a lead service line if it ever was or is currently downstream of any lead service line or service line of unknown material. This can include the replacement of lead goosenecks, pigtails, and connectors as eligible expenses, whether standalone or connected to a lead service line. Lead service line inventories are also eligible for this funding.

For FFY 2024 and 2025 LSL funding, galvanized lines that are currently or ever were downstream of known lead service lines or components are the only galvanized lines eligible for this funding. Therefore, if the galvanized lines are downstream of a service line of unknown material, these lines are not eligible for this funding from the FFY 2024 and 2025 LSL allotment, but are still eligible for funding from the base or supplemental allotments.

To assist communities with projects, the DEP and DH used set-aside funds to hire two contractors to assist communities with completing their lead service line inventories. These services are free of charge to the communities and are still available to those that did not complete the inventory by the due date.

- Systems with a service population of 1,000 or less, please reach out to Mary Hutson, WV RCAP at mhutson@wvrcap.org if you are in the St. Albans and Beckley

Districts. If you are in the Fairmont, Kearneysville, and Wheeling Districts, please contact Chris Hannah, Stantec, at chris.hannah@stantec.com or Richard Gaines, Stantec, at richard.gaines@stantec.com.

- Systems with a service population of 1,000 to 10,000, please reach out to the WV Rural Water Association at LSLI@wvrwa.org.
- Systems with a service population greater than 10,000, please contact Kathy Emery, DEP, at katheryn.d.emery@wv.gov if you need funding to hire a contractor to complete your inventory.

D. Emerging Contaminants

The IJA created a DWTRF funding stream for projects that address emerging contaminants. The funding must be in the form of additional subsidy as a principal forgiveness loan. West Virginia's allotment is \$7,640,000. This allotment requires that at least 25 percent of the grant be awarded to a disadvantaged community or a public utility serving a population less than 25,000. A list of potential emerging contaminants projects is included in Appendix H of this document.

For a project to receive funding under this program, it must be DWTRF eligible and the primary purpose must be to address emerging contaminants in drinking water with a focus on perfluoroalkyl and polyfluoroalkyl substances (PFAS). Projects that address any contaminant listed on any of EPA's Contaminant Candidate Lists are eligible (i.e., CCL1 – CCL5). Projects for which the primary purpose is to address contaminant(s) with a National Primary Drinking Water Regulation (PFAS exception) are not eligible. Eligible applicants must be a PWS, and sampling is only eligible when used as part of project design and construction for eligible projects. Applicants do not need to be eligible for additional subsidization under Section V.B to be eligible for this funding.

E. Set-Aside Activities

In addition to the DWTRF construction fund, there are four "set-aside" or non-project accounts administered by DEP and OEHS. These separate accounts include Administration of the Loan Program, Technical Assistance, State Program Management, and Local Assistance. In addition to funding for staff expenses, there are also programs being undertaken to improve the health and safety of State water systems.

The goals, objectives, methods, outputs, and outcomes for these set-asides are located in the grant work plans.

Anticipated Set-Asides (Non-Project Funds)

Technical Assistance (up to 2%) IJA & LSLR	\$ 500,000
DWTRF Admin. Expenses (up to 4%)	\$ 0*
Drinking Water Program Support (up to 10%) Base & IJA	\$ 1,493,149
Local Assistance/State Activities (up to 15%) Base, IJA, LSLR	\$ 4,823,825

*DWTRF Admin. Expenses will be funded from the Administrative Fee account.

The State is reserving the amounts unused from this grant to be potentially used at a later date and will apply for it when needed.

F. Annual Administrative Fees on PWS loans

Administrative fees are charged on all loans as a means of supporting the administrative costs of operating the DWTRF in perpetuity. These fees are maintained in a separate account outside of the DWTRF. The annual administrative fee is initially calculated using the outstanding principal amount of the loan over its life but repaid over the term of loan in equal installments as contained in the loan amortization schedule. The chart in Section V(A) will be used to determine the annual administrative fee on each loan. This fund will also be used to support the Capacity Development Program staff and other administrative expenses.

G. Design Loans

The DWTRF can provide design loans to eligible public water systems for projects on the PPL. The loans will be offered at the terms for which the applicant is eligible at the time of the design loan closing. See Section V(A). Design loan repayment will begin within the first quarter after the anticipated design submittal date.

H. Cyber Security

Free vulnerability assessments are available through CISA at www.cisa.gov/water and EPA is providing additional resources at www.epa.gov/waterresilience/epa-cybersecurity-water-sector. Any necessary upgrades resulting from an assessment are eligible project expenses.

I. Federal Requirements

As a recipient of DWTRF funds, the DEP must apply federal requirements to loans equal to the amounts of all the federal capitalization grants. Recipients of Congressionally Directed Spending grants from Congress are required to meet these federal requirements for the entire project, including any DWTRF funds.

The projects listed in Appendix B that have been designated as equivalency projects are required to comply with federal requirements including, but not limited to, the Single Audit Act, DBE, FFATA, Buy America Build America Act (BABAA), etc. These projects total more than the Base and IIJA FFY 2025 capitalization grants.

J. Green Infrastructure (Green Project Reserve – GPR)

The Capitalization Grant does not require any of the funds provided for projects to be used for water efficiency, energy efficiency, green infrastructure, or other environmentally innovative activities. However, these projects are encouraged and are eligible for funding.

K. Asset Management Implementation Effect on Loan Rates

The DWTRF program has required loan recipients to implement an approved asset management plan (AMP) since 2009 to help ensure sustainability of water systems by properly managing their assets. The systems that have maintained, updated, and implemented their AMP are eligible for a reduction of the eligible loan rate by up to 0.5% on their next project.

L. Loan Prepayment

DWTRF loan prepayment may be allowed under certain conditions upon prior written approval from the DEP and the WDA. All requests will be evaluated against Program policy and will not be considered earlier than ten years from loan closing unless under special circumstances. Refinancing through the DWTRF will be the preferred option.

M. Financial Status

The DWTRF will be managed by DEP with assistance, through a contract agreement, from the West Virginia Water Development Authority (WDA). The WDA maintains the financial records and ensures bond conditions and audit requirements are met. DEP oversees OEHS's expenditure of the grant set-aside funds. The DWTRF program financial status is healthy with a principal and interest repayment stream from loans at approximately \$9,900,000 per year. The Administrative fee from loans has an annual income stream of approximately \$800,000 which will be used for the administrative costs of managing the DWTRF.

SECTION VI

Assurances

- Anticipated Cash Draw Ratio (Proportionality) – State match funds are disbursed prior to using capitalization grant funds.
- The DEP has agreed to provide EPA with information for the public health results for all loans closed during this fiscal year. This documentation is being requested by EPA to better ascertain the public health results of projects funded under the DWTRF program. The DEP also agrees to add any projects that count as a Green Project Reserve project into the database.
- Projects will be uploaded into EPA's SRF database at least quarterly.

SECTION VII

Public Participation

Comments will be received on the DWTRF IUP for FY2026 until June 30, 2025. A public meeting for both the CWSRF and DWSRF Intended Use Plans will be held at 9:30 am on June 18, 2025, at the WV DEP Headquarters in Charleston, WV. The option to attend virtually will also be offered. The notice will be legally advertised in newspapers throughout the State. In addition, the DEP issued a notice of the IUP comment period by sending a mass email directly to consulting engineers, regional councils, and other interested parties.

Appendix C will contain the public comment notice and a summary of the comments.

APPENDIX A

FISCAL YEAR 2026 COMPREHENSIVE PROJECT PRIORITY LIST

FY2026 Priority List

Project	SRF #	Ranking	PriorityPoints

SRF #:	Needs Categories:	Problem	
D-144069	DW Source Change	<p>The Parker Hollow Impoundment has proven to be susceptible to algae blooms, some of which testing has shown are toxic anabaena algae containing cyanotoxins. Should an algae bloom containing cyanotoxins occur in the area around the water intake, the Bureau for Public Health would require a 'do not use' advisory to be issued until the bloom passes. Without a secondary water source, such an advisory would leave PSD customers without access to a safe water supply.</p> <p>Solution</p> <p>This project proposes to develop a new secondary groundwater source on SCC property adjacent to the Baker water treatment plant. Up to three test wells would be drilled to evaluate their potential as a secondary source. The cumulative desired yield of the well(s) is 200 gallons per minute. Based on the test well analyses, one or more of the wells may be converted to a production well. The cost estimate includes the conversion of all three test wells to production wells, as well as the installation of the raw water line and all related appurtenances necessary for a complete and operable system.</p>

Rank	Keyser, City of	\$6,500,000	\$17,500,000
7			
SRF #:	Needs Categories:	Problem	
D-144134	Treatment	The water treatment plant was originally constructed in the 1920's and has been upgraded throughout the years but was most recently upgraded in 2015. Even with the upgrades throughout the years, the water plant is still showing signs of aging and needing upgraded again, partially replaced, or totally replaced. Recently the water treatment plant had cryptosporidium samples collected and results of the highest arithmetic mean during 12 consecutive months of the 24 source water samples collected was 0.426 oocysts/L.	
County:		Solution	
Mineral		Keyser wishes to continue providing potable water service to existing customers through water treatment plant and system upgrades, proposing only partial replacement of the water treatment plant. The upgrades to the water treatment plant works remove the Cryptosporidium parasite from the treated water and bring the City into compliance with the West Virginia Bureau of Public Health. The City also proposes to upgrade the water distribution system by replacing and relocating the Old Orchard pump station. Telemetry will also be added at both the Old Orchard and Limestone pump stations/tanks.

D-144084	Treatment Storage	The 2020 WV Department of Health and Human Resources Sanitary Survey generally concludes that the existing plant is in good condition' however, it does identify several problem areas. It notes that the plant pumps on average, 16 to 17 hours per day. It notes and recommends correction of leaks in the 1,500,000 gallons finished water storage tank and the 254,000 gallons clearwell. The media in the existing filters is rounded and needing replaced. The Survey states that the 371,000 gallons pre-sedimentation basin is largely filled with silt which significantly reduces settling time.	
County:		Solution	
Logan		The project will consist of two construction contracts. Contract 1 will consist of upgrading the existing 2,800 gpm water treatment plant including increasing capacity to 5,600 gpm. Contract 2 will consist of construction of a new 800,000 gallons finished water storage tank and refurbishing an existing 1,500,000 gallons water storage tank.

Points 70.00	SRF #: D-144129 County: Tucker PERMIT #WV: 3304701 Binding Date: 6/30/2026	Needs Categories: Transmission & Distribution DW Source Change	Samples of raw water line to water treatment plant and section of distribution system line have shown lead concentrations in excess of the maximum contaminant limit. It is suspected that the water lines contain lead joints. There is also a failing section of asbestos cement pipe in distribution system. Also, Davis's primary water source, Weimer Run dam, is consistently leaking. The surface water intakes experience frequent clogging issues due to sediment buildup at their current location. The Blackwater River is considered an impaired river, and Davis has concerns regarding raw water supply and quality.	Solution
70.00			This project will replace 3,000 LF of the raw water line with PVC to reduce the lead concentration of the raw water. 600 LF of failing and/or lead contaminated water lines in the distribution system are proposed to be replaced. The Weimer Run dam will be rehabilitated by conducting a ground penetrating radar study to identify voids in the structure, then injecting grout into the voids to stop the leaks. The surface water intakes will be upgraded with new screens and an airburst system to prevent sediment buildup. A hydrogeologic study will be conducted to evaluate the potential to develop a secondary groundwater source.	
Rank 14	Fairview, Town of (Phase III)	\$1,500,000	\$2,500,000	Problem
Points 70.00	SRF #: D-144196 County: Marion PERMIT #WV: 3302503 Binding Date: 6/30/2026	Needs Categories: Transmission & Distribution	Fairview (Town) has many sections of cast iron, galvanized steel, and asbestos concrete water mains that are prone to leaks causing water loss. Fairview's unaccounted for water loss is approximately 35%. The Town has multiple fire hydrants that are connected to a 4-inch water main instead of a 6-inch main. Also, Fairview has approximately three water customers that are on permanent boil water advisory due to lack of turnover on existing water line which is fed from a hydro-pneumatic booster station.	Solution
70.00			Install new water line along Jesse's Run Rd, Grant St., Stone St., and Williams St. to replace the aging cast iron, and asbestos concrete water lines to address water loss. There are multiple fire hydrants in these locations which are currently fed from a 4" water main. The new water line will be a minimum of 6" in diameter and new fire hydrants will be installed on this line. Also, review hydraulics of Fairview's system and analyze effectiveness of smaller diameter water main, hydro-pneumatic pump size and possible automatic flushing hydrant to address customers on a permanent boil water advisory.

16				
SRF #:	Needs Categories:	Problem		
D-144233	Treatment	Due to long term use of the components of the existing water treatment plant, some of the components have become worn, and do not work as efficiently as they used to. Additionally, some components are not operable or were not functioning as intended. Due to extensions of the existing Mingo County PSD Water System, there is also larger demand throughout Mingo County. The plant struggles to provide sufficient treated water to recover in the event of outages.		
County:		Solution		
Mingo		In order to address the larger demand and wearing of the water treatment plant, upgrades are necessary. The upgrades will include the installation of a new raw water intake, adding 2 new filters, replacement of the grit removal system, the chemical feed system, and the sludge handling system with all necessary appurtenances. This will help the water treatment plant run smoother and more efficiently. This upgrade will double the capacity of the plant which will reduce operating times and allow the system to recover from outages.

D-144160	Transmission & Distribution	<p>Existing tanks are in average condition and have been repainted recently. The current tanks provide the required 72 hours of potable water storage. With the average daily use being just over 55,000 GPD, the water tanks contain over 3.5 days of water supply for the PSD when full. The existing water line from the Fairmont meter to the Goose Run Booster Station is 55 years old and needs to be replaced. Existing water lines in the Pine Grove Rd area must also be replaced. A roadway slip occurred in 2023 that damaged a section of the water line, and a temporary water line has been installed to restore service to existing customers.</p> <p>Solution</p> <p>The proposed project consists of replacing existing water lines within the PSD's existing water distribution system to mitigate water loss, install 1 new booster station while making repairs at another, and install a new pressure-reducing valve vault and control valve station. This proposed project will be a Phase II - Water System Improvement project that will reduce the PSD's current water loss, reduce yearly O&M costs associated with leaks/breaks, provide a backup water connection to the Town of Monongah, and upgrade the existing system.</p>

Rank 69	Marlinton, Town of	\$5,580,000	\$5,580,000	Problem	The existing water distribution system that serves the downtown area of Marlinton is over 100 years old. Extensions were made in 1992 to serve 37 customers. Water losses from the distribution system were traced to the previously inoperable telemetry system that had allowed the tanks to overflow; that system was replaced with the 2019 upgrade project, and water loss has fallen to 50%. Much of the rest of the water loss can be attributed to deteriorating galvanized and cast iron mains, some of which are over 100 years old and have reached the end of their useful lives.
Points 45.00	SRF #:	Needs Categories:	Solution	Water Systems Improvement Project: The oldest sections of Marlinton's distribution system will be replaced to reduce water loss and improve service conditions. This will include replacement of 20 fire hydrants, replace/install 41 2-inch and 6-inch valves, replace 10,000 LF of existing 1-1/4 and 2-inch water mains with new 2-inch PVC mains, replace 10,000 LF of existing 4-inch mains with 6-inch mains, install 10 leak detection meters and place 300 meters, setters and meter wells.

D-144117	Transmission & Distribution	Existing pumping system in the area known as The Ridges is quite complex, involving a set of four pump stations operating in a series to provide the residents and businesses potable water. These four pump stations, along with a separate pump station operating at Wilson Ridge Rd, all have differing designs and operating procedures. Each pump station is operating with a single pump, with some stations containing two and three inoperable pumps. The pump stations operate with discontinued equipment, which has rendered the failing pumps irreparable and left the system with no fail safes.	
County:		Solution	
Greenbrier		The selected project proposes the replacement of the pumps, motors, appurtenances with electrical issues, control systems, in the existing booster pump stations along with the replacement of pumps, motors, control equipment, and electrical equipment in the City of White Sulphur Springs Water Treatment Plant while utilizing the existing infrastructure to maintain the current operation and maintenance practices the operators have become familiar with. *Are considering adding SRF funding.

D-144124	Treatment Land Acquisition	The City of Benwood has been experiencing issues with Iron and Manganese within their groundwater supply source. While this issue has been ongoing a study conducted by the USGS and US EPA was completed to test the amount of PFAS and PFOS within the drinking water source. Benwood's source water was determined to be affected by these chemicals. A project is being proposed to remove the Iron, Manganese, and PFAS and PFOS Chemicals from the drinking water.	
County:		Solution	
Marshall		The proposed project is going to address the Iron and Manganese issue as well as the PFAS Chemicals. A new treatment building will be constructed to house the required treatment options to address the problems that the City of Benwood is currently dealing with. To do so three pressure filters will be installed to address the Iron and Manganese, while a technology to be determined after pilot testing has been completed will be installed to address the PFAS and PFOS chemicals.

SRF #:	Needs Categories:	Problem	
D-144132	Transmission & Distribution	Residents in the Mellin Ridge area currently rely on private wells for their water supply, which are unreliable as a potable water source. These private wells can become contaminated with bacteria, or run dry due to overuse or environmental factors. Residents whose wells have run dry must have potable water hauled in from a private company. This alternative is costly and unreliable, as inclement weather can halt deliveries and leave residents without water fordays. Residents of Mellin Ridge have petitioned the Town of Harrisville to extend their water distribution system and provide service to the Mellin Ridge community.	
County:		Solution	
Ritchie		This project proposes to extend the water line west from the Washburn Pump Station alongGillespie Run Road and Mellin Ridge Road. The proposed extension will provide potablewater service to approximately 60 new customers. The extension will consist of the installation of approximately 51,500 linear feet (LF) of new water pipe ranging in size from six inches totwo inches in diameter. The existing Washburn pump station will also be upgraded to support the increased water distribution demand due to this project.

147			
	SRF #: D-144115 County: Greenbrier PERMIT #WV: 3301314 Binding Date: 6/30/2026	Needs Categories: Transmission & Distribution DW Source Change	Problem <p>The City of White Sulphur Springs and the City of Lewisburg operate water treatment plants within their respective city limits, however neither water plant has backup in place if their plants go down. Lewisburg Water Plant has been without power on 5 events since 2012 totaling 219 hours. White Sulphur Springs Water Plant has also been affected by loss of power on numerous occasions. A generator may help in certain circumstances, but many times storms or other disastrous events can cause source water to be contaminated or unusable. A more dependable backup is necessary to assure water plants remain in service.</p> Solution <p>White Sulphur Springs and Lewisburg systems are approximately 7,000 LF apart on US Rte 60, making interconnection a viable option in establishing a backup water source for each utility. This connection would not serve as a permanent solution and each system could not fully serve the other system. Linking the White Sulphur system to the Lewisburg system will serve to greatly boost the efforts to mitigate such a deficiency should a disaster be realized. Safe and clean potable water is essential to recovery efforts after a disaster occurs, keeping medical and emergency facilities in operation. *Are considering adding SRF Funding.</p>

148			
	SRF #: D-144116 County: Greenbrier PERMIT #WV: 3301314 Binding Date: 6/30/2026	Needs Categories: Transmission & Distribution Storage	Problem <p>The fire hydrants along Rt. 92 in White Sulphur Springs was discovered to have an inadequate water supply to allow proper tire flow. The customers in the area also have an inadequate system flow, so their water will be renovated to be attached to the main distribution system from the City's water treatment plant.</p> Solution <p>Due to the lacking water supply in the area, a new 40,000 gallon water storage tank is proposed. This will allow proper fire flow for the project area which will make the area safer and improve quality of the City's distribution system due to increase amounts of water. This project also proposes a new 100 gallon per minute booster pump replacement as well as other appurtenances necessary for the project. Additionally, the existing customers in the area will be reconnected to the City's distribution system and supplied from the City's water treatment plant. *Are considering adding SRF funding.</p>

		Currently, the existing 150 gpm water treatment plant (WTP) is in need of upgrades and replacements and is reaching the end of its useful life. It has been determined that construction of a new 300 gpm WTP is needed to meet future demand and lower the daily water pumping time from 10 to 12 hours down to under 8 hours per day. The existing WTP location does not allow for an expansion on the site. Construction of a new WTP while allowing the existing WTP to operate is the chosen option.	
		Solution	
		Construct a new 300 gpm water treatment plant (WTP) to meet future demand and lower the daily water pumping time from 10 to 12 hours down to under 8 hours per day. The existing WTP location does not allow for an expansion on the site. Construction of a new WTP while allowing the existing WTP to operate is the chosen option.	

Rank 164	Summit Park PSD	\$7,230,000	\$7,230,000
SRF #: D-144083 County: Harrison PERMIT #WV: 3301725 Binding Date: 6/30/2026 Points 25.00	Needs Categories: Transmission & Distribution	Problem	
		Many sections of the distribution system, including a secondary water connection to Clarksburg, are in failing condition, resulting in leaks that contribute to 18.9% water loss in the system. With the secondary connection to the PSD's water source in poor condition, the system is left vulnerable in the event there is a problem with the primary water connection to Clarksburg. The system also includes 32 fire hydrants that are in desperate need of replacement in order to provide adequate fire protection to the community.	
		Solution	
		This project proposes to upgrade the PSD's existing water distribution system through the replacement of approximately 33,500 linear feet of main water line, the replacement of approximately 32 fire hydrants, and the rehabilitation of the existing secondary connection to the Clarksburg Water Board system. These upgrades are imperative to provide adequate fire protection to the community and improve the reliability of water service to PSD customers.

D-144100	Transmission & Distribution Storage	<p>Residents of the project area currently make use of individually owned water wells as a source of potable drinking water. This is a public health and safety concern as water wells are more easily contaminated by nearby septic tanks, overland flow, improper storage of fuels and residential oil sources, and improper maintenance and construction of the well itself. The installation of public water sources would provide a higher quality and more dependable source of potable water.</p>		
County:	Land Acquisition	Solution		
Logan		<p>Project proposes the construction of 23,200 LF of waterline 8" and smaller, the installation of one 100 GPM booster pump station, one 100,000 gallon water storage tank, and other related appurtenances.</p>

D-144138	Transmission & Distribution	<p>The aging infrastructure of the City's water system is adding problems to the City and its ability to provide potable water to its customer base. The City experienced unaccounted water loss of 24.32% based on the 2023 PSC Annual Report. In the Sanitary Survey performed in December of 2021, the WV Department of Health and Human Resources documented a minor concern of the galvanized piping within the water system.</p> <p>Solution</p> <p>This project consists of replacing approximately 7,450 linear feet of 6-inch diameter waterline, 1,260 linear feet of 8-inch diameter waterline, 5,500 linear feet of 4-inch diameter waterline, approximately 230 new meter settings, approximately 40 tie-ins into existing line, removal, and replacement of 10 fire hydrants, 1 new post flushing hydrant, 8 gate valves, and various city street and trench repairs. The section of upgrades includes the streets of Marshall Street, Baltimore Street, East Baltimore Street, and 3rd Street through 8th Street.</p>

182			
SRF #:	Needs Categories:	Problem	
D-144200	Transmission & Distribution	<p>Grafton (City) is currently in the design phase of a sanitary sewer rehabilitation project in the downtown area. The existing water lines in this area are cast iron or asbestos concrete and the City has constant issues with leaks. There are concerns that during construction of the sanitary and storm sewer lines that there will be issues with water main leaks and breaks throughout the city due to the condition of the water system.</p> <p>Solution</p> <p>Replace the existing asbestos concrete and cast iron water lines within the areas of the sanitary sewer project. This will help to prevent water main breaks and leaks during and after construction of the sewer project. Installing new water, sanitary, and storm lines in the same construction period would also prevent Grafton from needing to perform all restorations in two separate projects. This would allow all streets to be paved once. This project proposes to install new 4", 6", 8", and 12" water mains throughout the downtown area of Grafton.</p>

183				
SRF #:	Needs Categories:	Problem		
D-144199	Transmission & Distribution Storage	<p>Grafton currently operates a 525,000 gallon, underground water storage tank that was constructed in the 1950s. The tank is difficult to maintain and check for leaks. Some of the main distribution lines to this tank were also constructed over 50 years ago and are in need of replacement.</p> <p>Solution</p> <p>This project proposes to replace the existing underground tank with a new, above ground tank to provide better hydraulic service to the system and allow for better maintenance. This project also proposes to replace existing 12" main water line that provides water to the existing tank to reduce the number of leaks and allow the City of Grafton to provide more reliable service to their customers.</p>

184				
SRF #:	Needs Categories:	Problem		
D-144214	Transmission & Distribution	<p>Morgantown's (MUB) system includes over 28,000 water system meters used to bill customers on a regular basis for water service. Collecting this data manually is a time-consuming process and, in some cases, meters are in areas which are challenging for MUB's staff to access efficiently. Older less sophisticated meters have experienced wear and are losing their accuracy with use as they reach the end of their useful life.</p> <p>Solution</p> <p>Morgantown will begin a phased approach over several years to replace portions of their existing water system meters for residential, commercial, and industrial use, with meters equipped with improved drive-by automated meter reading technology. The first phase of replacements would include approximately 5,000 meter locations. Meters selected for this phase would include large-diameter meters and residential meters that are in areas that are difficult to access and measure the largest percent of customer demands within the water system.</p>

DWTRF Project Priority Ranking System

(1) _____ **PUBLIC HEALTH** (0 to 50 points - 50 points maximum)

Up to fifty points may be given to a project for public health. The public health categories are listed below. A project may apply to several categories. In such cases, the project will be given the highest rating.

(A) **50 points Projects to correct acute health hazards** - Fifty points will be given to projects that propose to eliminate a problem that poses an acute, ongoing health hazard to the consumer. Violations should be included in the Enforcement Tracking Tool (ETT). Examples are listed below.

- Projects that address documented nitrate or nitrite violations.
- Projects that address documented exceedances of primary inorganic MCL's
- Projects that address a problem where a system has significant turbidity violations. The project must ensure compliance to receive DWTRF assistance.
- Projects that address a problem where a system has significant microbiological violations. The project must ensure compliance to receive DWTRF assistance.
- Projects that propose filtration for surface water source that currently do not have filtration.
- Projects that propose disinfection for a system that currently do not have disinfection.
- Projects that address documented or potential water outages for extended periods (1 week or more) due to contamination or system/design deficiencies.

(B) **40 points Correct chronic health hazards** - Forty points will be given to projects that propose to eliminate a chronic health hazard to the consumer. Examples are listed below.

- Projects that address occasional turbidity violations for a system that has a moderate ETT score.
- Projects that address occasional microbiological violations for a system that has a moderate ETT score.
- Projects that address exceedances of the Lead and Copper Rule.
- Projects that address documented exceedances of primary organic MCL's.

- Projects that address documented exceedances of radiological MCL's.
- Projects that address treatment technologies for the SWTR.
- Projects that address documented or potential water outages (1 to 6 days) due to contamination or system/design deficiencies.
- Projects that enhance source water protection to prevent widespread contamination throughout the distribution system via alternate water sources or additional storage.

(C) 30 points Correct periodic health hazards - Thirty points will be awarded to projects that propose to eliminate a documented health hazard which has occurred periodically. Examples are listed below.

- Projects that address low chlorine residuals.
- Projects that address periodic exceedances of a primary MCL.
- Projects that address periodic water outages to some customers for at least a day due to design or system deficiency.
- Projects to bring existing facilities to current design standards which affect water quality: treatment, chemical application, pumping facilities, finished storage and distribution systems.

(D) 20 points Correct potential health hazards - Twenty points will be given to projects that propose to eliminate potential health hazards. Examples are listed below.

- Projects for line extensions to areas with poor water quality or limited quantity.
- Projects to develop new source to augment existing sources where there is no other health hazard associated with the project. Dams and reservoirs are not eligible.
- Projects for installation / upgrade of waste disposal facilities.

(E) 10 points System Improvements - Ten points will be given to projects that propose general system improvements. Examples are listed below.

- Projects to replace / repair old, undersized, or malfunctioning equipment.
- Projects to replace leaking water line.
- Projects to improve aesthetic quality of the water such as iron, manganese, taste and odor.

(2) _____ REGULATORY COMPLIANCE (0 to 20 points, 20 points maximum)

(A) 20 points Correction of chronic non-compliance - Compliance with administrative orders, agreements, statutes, or regulatory requirements.

(B) 10 points Compliance with periodic and potential non-compliance - Compliance with sanitary survey recommendations, NPDES permits, new

regulations, or design standards.

(C) **5 points** **Protection against non-compliance** - Compliance with proposed regulations.

(D) **3 points** **Line extensions with documented cases of fecal coliform**

(3) _____ **AFFORDABILITY** (0 to 30 points) (Based on post-project user rates)

Rates = 0% to 0.49% MHI (**0 points**)

Projected Rate:

Rates = 0.50% to 0.99% MHI (**5 points**)

MHI:

Rates = 1.00% to 1.24% MHI (**10 points**)

Mun./County/Mag. Dist. Used:

Rates = 1.25% to 1.49% MHI (**15 points**)

Rates = 1.50% to 1.74% MHI (**20 points**)

% MHI:

Rates = 1.75% to 1.99% MHI (**25 points**)

Rates \geq 2.0% MHI (**30 points**)

Note: MHI = median household income by county or municipality as published by the West Virginia Infrastructure and Jobs Development Council (IJDC) at time of approval for funding by IJDC. If the project sponsor can clearly show that a magisterial district census income reflects the affordability more appropriately the magisterial district census data may be used in place of the county census data.

Rates are based on 3,400 gallons.

Public Health	
Compliance	
Affordability	
Total Points	

Tie Breaker:

If two or more systems have the same score, the following will be used as the tie- breaker.

1. Whichever system has the highest public health rating will be ranked highest. **Shown in above table.**
2. In the event there is still a tie, then the system with the smaller population served will be ranked higher.

Population:

Definitions

MCL -- Maximum Contaminant Level

ETT -- Enforcement Tracking Tool

SWTR -- Surface Water Treatment Rule

Total Projects					\$5,115,840	\$15,937,480	\$7,403,900	\$10,680,517	\$13,891,500	

Activity Codes and Binding Commitment dates
P - facilities planning underway - Summer 2026
D - design underway - Winter 2026
D2 - design under review at DEP - Fall 2025
D3 - design approved by DEP/bid process underway - Summer 2025 unless a specific date is provided

Equivalency Designation
E - Equivalency (See Section V. J. of the IUP for federal requirements)
NE - Non-Equivalency

Funding terms are established in the binding commitment letters issued to the project applicants when the project is ready to proceed.

APPENDIX C

PUBLIC MEETING SUMMARY

The FY2026 IUP Public Meeting was scheduled for June 18, 2025, at 9:30am. The meeting took place at the WV DEP's Headquarters in Charleston, WV. An option to attend remotely or call-in was also given.

APPENDIX G

POTENTIAL LEAD SERVICE LINE PROJECTS

DRINKING WATER STATE REVOLVING FUND

"Lead Service Line" Infrastructure Project Solicitation for FY2026 IUP

Project	Description	Total Project Cost Estimate	Total LSL Cost
Clarksburg Water Board (Phase 3B)	Lead Service Line Replacement and Associated Main Line Water Line Replacement.	\$30,000,000	\$15,352,000
Davis, Town of	Replace 3,000 LF of the raw water line with new 8-inch PVC water line to reduce the lead concentration of the raw water. Sections of failing and/or lead contaminated main water lines in the distribution system are proposed to be replaced with 600 LF of 6-inch PVC water line.	\$1,260,000	\$600,000
Gary, City of	Complete a lead service line inventory and then develop a plan of action.	\$3,821,000	\$150,000
Tomlinson Public Service District	Construction of a new 800 GPM treatment plant, refurbishment and upgrade of existing wells, refurbish existing 1.7 MG storage tank, one new 12" raw water line, and one new 12" finished water line connecting back to the distribution systems.	\$14,343,150	\$203,150
West Virginia American Water	Remove and replace 18 identified lead or galvanized service lines in the WVAV Huntington water system.	\$508,600	\$508,600
White Sulphur Springs, City of (Villa Park)	Replace existing water lines throughout the Villa Park area of White Sulphur Springs in Greenbrier County, West Virginia. Approximately 14,400 LF of 6" waterline is to be installed as well as 2,450 LF of 2" waterline, 214 service re-connections, 13 fire hydrants, valves, and other necessary appurtenances.	\$4,935,000	\$1,233,750
	TOTAL	\$54,867,750	\$18,047,500

APPENDIX H

POTENTIAL EMERGING CONTAMINANTS PROJECTS

DRINKING WATER STATE REVOLVING FUND

"Emerging Contaminants" Infrastructure Project Solicitation for FY2026 IUP

Project	Description	Total Project Cost Estimate	Total EC Cost
Benwood, City of	Address the Iron & Manganese issue as well as the PFAS Chemicals.	\$4,800,000	\$4,000,000
Glen Dale, City of	Provide a 5,500 LF 10-inch connector line between the City of Glen Dale WTP and the City of Moundsville WTP. A master meter and PRV will also be apart of the project to equalize the hydraulic grades.	\$1,721,000	\$1,721,000
Hardy County Public Service District	Upgrade the existing WTP with a new pretreatment system utilizing ion exchange to remove PFAS from the water supply.	\$3,450,000	\$1,500,000
Lubeck Public Service District	Installation of approximately 18,000 linear feet of 6" water line along Pine Run Road.	\$1,500,000	\$1,500,000
Lubeck Public Service District	Installation of an additional GAC filtration process at the Water Treatment Plant.	\$15,000,000	\$7,500,000
New Martinsville Water & Sanitary Sewer Board	Install greensand filters for iron and manganese control and GAC filters for PFAS treatment.	\$20,480,000	\$20,480,000
Parkersburg Utility Board	GAC for PFAS treatment	\$21,584,100	\$21,584,100
St. Marys, City of	Install greensand filters for iron and manganese control and GAC for PFAS treatment.	\$9,500,000	\$9,500,000
Union Williams Public Service District	Upgrade the existing Union Williams WTP with a new pretreatment system utilizing ion exchange to remove PFAS from the groundwater supply.	\$5,000,000	\$1,000,000
Walton Public Service District	Implement GAC filtration to remove PFA's and refurbish or replace existing filter media and controls, electrical service, pumps, backwash basins, presedimentation basin and the filter building.	\$5,450,000	\$5,450,000
Williamstown, City of	Greensand filters for iron and manganese control and GAC for PFAS treatment.	\$5,210,000	\$5,210,000
	TOTAL	\$93,695,100	\$79,445,100
